

AIG CyberEdge[®] Risk Consulting Services

Cyber Engineering Study

Are you doing the right things to protect the industrial controls in your environment?

AIG's Cyber Engineering Study is designed to take a look at your people, processes, and tools that protect critical systems and industrial controls within your environment. Our cyber consultants, who average 20+ years of experience in cyber security, combine their expertise with our 20 years' worth of claims and underwriting data to examine your technical controls, maturity, and hygiene, and the impact a cyber breach could have – to both tangible and financial assets. The outcome of the study is an actionable plan to reduce your cyber risk.

Service Kickoff

Together with your AIG consultant, you'll:

- Discuss areas of your security program to review
- Identify and send documentation and other information for AIG to assess prior to onsite arrival
- Establish onsite dates and interview schedule

Service Execution

During the study, your AIG consultant will:

- Review security architecture and processes related to industrial controls
- Interview staff to discuss what's working and what's not
- Review logs and other elements
- Correlate findings from all reviewed elements

Service Takeaways

Following the study, you and your consultant will:

- Review the final report, which is delivered within 10 business days and will include all findings and recommendations
- Participate in a remote or onsite C-level presentation of findings with industry comparison and recommendations

Targeted attacks on computer industrial control systems are the biggest threat to critical national infrastructure. Let us help you reduce that risk.
