

# Cyber Sales Playbook

# The Sales Opportunity

# Client awareness is soaring

Few lines of business insurance have as many statistics highlighting increasing numbers of incidents and exposures as cyber liability. It is not surprising that so many companies are reported to be thinking about the need for this insurance, while C-Suite and risk managers see cyber exposures as one of their top risk concerns.

# **Significant impact**

While risk managers and executives point to cyber risk as a top concern, cyber exposures are also one of the least insured. This suggests that clients will be very interested in discussing their cyber exposures and possible insurance solutions.

# **Market opportunity**

CLAIMS

SCENARIOS

Organizations have become increasingly concerned about protecting their data, their products, their property, and their reputation. All companies are at risk, presenting brokers with a significant opportunity to assist clients with assessing their exposures and working with carriers to craft solutions.

# Cyber is consistently one of the top risks businesses face, with the average cost of a breach at approximately \$3.6 million.<sup>1</sup>

### Other hot topics:

- Increasing awareness of the potential for reputational harm has led to more C-Suite involvement in strategic cyber initiatives.
- I.T. departments cannot be the sole source for defending against cyber risk.
- Cloud computing and mobile technology are growing areas of concern when it comes to potential sources of cyber risk.
- Clients are increasingly aware of cyber network downtime as a potential loss from a cyber issue.

Manufacturing

CONTACT US

# **Target Clients**

also placed at greater risk for fraud.

Any company that relies on technology and stores, manipulates, or transmits data is at risk of a cyber incident.

COVERAGE

#### Healthcare

The rise of electronic health records, other digital health platforms, and connected devices have made healthcare more vulnerable to security breaches. According to a recent security threat report, healthcare is becoming one of the most targeted industries.<sup>2</sup>

#### **Banking/Finance**

Financial institutions have long been high on the radar of hackers given the sensitive data at stake. Malware, nonapproved devices, and third party business applications all pose unique challenges to banks and other financial companies. **There are approximately 1.2 million new malware or variants on average each day.**<sup>2</sup>

# Large Business

Many large businesses believe their IT department is effectively managing the risk from cyber threats. This is similar to doctors not carrying malpractice insurance because they have years of medical experience and expertise.

CLAIMS

SCENARIOS

### **Small and Mid-sized Business**

Mid-sized companies may house large amounts of valuable data – and are more likely to be using legacy systems – but lack the data security budgets of their big business peers. **61% of data breach victims are businesses with under 1,000 employees.**<sup>3</sup>

### Energy

Retail

In recent years, increasing attention has been paid to the critical importance of cybersecurity for energy companies. Possible vulnerabilities in industrial control systems and ever greater intersections between operational technology and information technology suggest a significantly heightened exposure, with implications for business interruption, property damage, and bodily injury.

Manufacturing and production facilities require integrated,

and effective. Supply chain, outsourcing, and equipment

failures are just a few areas that raise the cyber threat risk.

Retailers hold a wealth of client information including credit

and debit card numbers. Clients who typically use the same password and save login details across several accounts are

reliable operations systems to ensure their production is timely

### **Higher Education**

Institutions of higher education are particularly vulnerable to cyber threats due to their open environments, student and faculty information stored, and breadth of services provided. In addition, these institutions may face limited resources and budget constraints, making it difficult for them to keep up with the rapidly changing cyber threat environment. The experts agree: service providers, financial services, insurance, real estate, and healthcare organizations are the most commonly targeted industries.<sup>1,2</sup>

# **Managing Objections**

Most companies today are generally aware of cyber risk. However, some are still uncertain about the exposures they could actually face and others may misunderstand the scope and cost of cyber liability coverage available.

Below are a few suggestions to help manage such objections and overcome these obstacles to purchase.

#### We already have these measures in place.

Companies may already purchase or deploy certain cybersecurity strategies, but do they know whether or not these services are truly effective? AIG can help assess the current state of your client's cybersecurity posture.

# We determine coverage needs based on what our peers are doing.

Every company is unique and cyber criminals, employees, and competitors may be interested in your client's digital assets. AIG has underwritten thousands of cyber policies and has experience across numerous industries. Our underwriting model and corresponding reports can help companies determine their needs through benchmarking and risk reducing controls. Learn more here >

#### We weren't aware of the additional services.

Proactive measures to guard against cyber attacks are essential to effective risk management. AIG provides complimentary services such as employee eLearning, blacklist IP blocking, domain protection, and proactive pre-breach consulting to help insureds prevent and prepare for a breach. In addition, our team of experienced cyber risk consultants is available to assist in developing customized risk mitigation strategies through AIG and its partners. Please refer to the Loss Prevention Services tab of the playbook for additional information.

# Our data and/or industry is not a high-risk target for cyber threats.

No company is safe from cyber threats, and bad actors are actively exploiting the vulnerabilities of companies and industries that do not perceive themselves as high risk. Ask your client: could they withstand a complete shutdown of their network for any period of time? There's more than data at stake, and AIG's cyber insurance is there to respond—from network interruption to cyber extortion and optional extensions for third party bodily injury and property damage.

#### Our IT department is managing risk effectively.

A strong IT department is essential to managing cyber risk; but, given the proliferation of ransomware and daily new variants of malware, it is impossible to prevent every attack. Insurance serves to complement a client's IT department; and, if the worst occurs and their system is breached, it provides the peace of mind of knowing they have a team of experts ready to respond.

# The financial cost of an incident would not be significant.

The average cost of a breach is currently estimated at more than \$3.6 million.<sup>1</sup> You may want to look at a breach calculator – like the one in our CyberEdge<sup>®</sup> mobile app – with your client to estimate costs and assess the potential impact of various scenarios.

NEXT MANAGING OBJECTIONS >

COVERAGE

CONTACT US

# Managing Objections Continued

# We don't need it. We're not subject to U.S. regulation.

Fines and penalties represent only a portion of the costs that may be incurred as a result of a breach. Organizations must also consider reputational harm, data recovery costs, business interruption, and possible third party liability. In addition, the regulatory environment is constantly evolving, with certain industries adopting standards and best practices separate and apart from government regulation.

# Cyber threats are evolving quickly, it is difficult to keep up.

In a rapidly changing landscape, AIG's cyber solutions provide innovative protection and responsive guidance based on years of experience. With AIG's help, businesses keep ahead of the curve when it comes to managing cyber risk.

### We don't need it. We aren't a large corporation and don't think our data and/or industry is a high risk for cyber threats.

61% of data breach victims are businesses with under 1,000 employees.<sup>3</sup>

### We don't need it. We outsource our security.

Companies are increasingly moving towards outsourced service providers and cloud-based storage. Still, such providers must be properly vetted. Insureds should read the fine print, as contracts often limit the providers' liability in the event of a breach.

### The cost of cyber insurance is too high.

Cyber premiums are modest in comparison to the potential cost of a cyber event, when all components – data recovery, event management, reputational harm, network interruption, and other third party liability – are taken into account. Cyber insurance provides an effective and affordable tool to help manage an incident and mitigate disruption to your client's business.

#### We don't want to disclose all of our cyber vulnerabilities with you for fear they will be used against us in the event of a claim.

AIG is here to help protect your client's business from a cyber claim. The more information shared, the better we can help protect your client.

# Our existing insurance policies typically cover some cyber risk.

CLAIMS

SCENARIOS

AIG offers a comprehensive cyber risk management solution. No other form of liability insurance offers such specialized coverage to assist clients in handling all aspects of a cyber incident. While other policies may offer coverage for certain components of cyber risk, the policy may contain certain exclusions or sub-limits impacting or limiting the coverage.

Cyber insurance can also be packaged with other policies, such as Property Performance Services, to provide additional placement and coverage options.

# I've never had a cyber breach so I don't need this coverage.

The environment is constantly changing, and with the ever increasing reliance on data, companies may be more susceptible to security and privacy threats than ever before. Future legislation and increasingly stringent industry standards also suggest that the costs of a breach will continue to climb. Proactively managing the risk is crucial.

# **Client Roadmap**

Companies are looking for a way to benchmark their cyber maturity and quantify their cyber exposure. AIG is uniquely positioned to provide relevant feedback, together with actionable insights to assist clients in identifying opportunities to reduce their cyber risk.

- 44

Read below to learn how prospective and existing clients can benefit from using AIG's interactive insurance application, cyber underwriting model, and CyberMatics.

Complete the Interactive Cyber Application

A dynamic and interactive application, as questions populate based on responses, industry, size, exposure, and coverage sought.

A quote can be provided based on responses to the minimum required questions, however clients are encouraged to answer all the questions or at least the "prioritized" questions so that they receive a quote commensurate of their risk profile, as well as receiving more transparency and feedback on their risk profile.

# Advantages of filling out our application:

**Speed:** for a quote, certain applicants only need to answer the required minimum questions! (More comprehensive responses may result in a more favourable quote, and with binding, clients receive a detailed risk report, as seen on the next page.)

**Personalization**: the application is tailored to a client's individual profile and coverage requests/requirements

**Recognition:** comprehensive answers can provide acknowledgment for what clients are doing well

**Our Cyber Underwriting Model** 

NEXT >

AIG receives the application and data is run through our cyber underwriting model.

We score and quantify client cyber risk: current threat **intelligence + effectiveness** of an organization's cybersecurity controls based on their application responses + potential **impact** of a cyber breach on the organization + **insights** gained from the thousands of cyber claims we've handled.

The model is based on historical insights and patterns of how companies experience cyber breaches: points of entry and types of attacks and vulnerabilities seen in the vast majority of cyber breach scenarios.

# Client Roadmap, cont.

**Report** generation

Cyber Maturity: an organization's preparedness against cyber threats and its ability to protect its information assets

Threat Likelihood: likelihood of a malicious or unintended action that may expose one or more weaknesses within an organization's IT ecosystem

Business Impact: degree of confidentiality, integrity, and availability impact associated with applicable assets within an organization

A sample of a full report with benchmarking and indicators of top risk reducing controls

**Control Effectiveness:** indicates how much each control reduces risk, depending on how well the controls are implemented

Implicit Risk: combination of threat and impact risk associated with an organization, not including benefits of cybersecurity controls

**Residual Risk:** remaining combination of threat and impact risk associated with an organization, including benefits of cybersecurity controls

>>

Top 5 Risk Reducing Controls

Applicants who submit the new application can receive a basic level report, even if they do not bind their cyber insurance with AIG.

< BACk

Insureds who submit the new application and bind coverage with AIG receive a full report with benchmarking information, when available. The full report can help clients indicate top risk reducing controls.

#### Why is this useful?

CISOs can use this information to understand their organization's threat profile and resilience in detail, by both attack type and asset class, and further use the model's mapping on how different controls affect each risk scenario to adjust the overall security maturity of an organization.

Enhancing the cyber underwriting model, CyberMatics<sup>TM</sup>, AIG's patent pending security services-led approach, provides AIG with a more accurate and up-to-date risk assessment of a client's IT environment, and provides the building blocks to offer insights directly to the client on a real time basis.

Proactive loss prevention services to further improve a client's cyber maturity >>

# **Proactive Loss Prevention Services**

# Optimizing the value of CyberEdge

Do insureds understand the suite of services potentially available beyond the insurance policy? AIG supports an end to end risk management approach, with numerous breach prevention and risk consultation services.

### Verified client data received from DarkTrace or Crowdstrike

Darktrace is the world's leading machine learning company for cyber security. Created by mathematicians from the University of Cambridge, the Enterprise Immune System uses AI algorithms to automatically detect and take action against cyber-threats within all types of networks, including physical, cloud and virtualized networks, as well as IoT and industrial control systems. A self-configuring platform, Darktrace requires no prior set-up, identifying advanced threats in real time, including zero-days, insiders and stealthy, silent attackers. Headquartered in San Francisco and Cambridge, UK, Darktrace has 30 offices worldwide.

- Only clients using Crowdstrike or DarkTrace are currently eligible for CyberMatics.
- Once a client signs up for CyberMatics, it will need to give CrowdStrike and Darktrace permission to share verified data relevant to the cyber underwriting model with AIG.
- The vendor will pull the information from the client's network regularly, translate the information into data relevant to the cyber underwriting model, and provide the data to AIG.

CrowdStrike is the leader in cloud-delivered endpoint protection. Leveraging artificial intelligence (AI), the CrowdStrike Falcon<sup>®</sup> platform offers instant visibility and protection across the enterprise and prevents attacks on endpoints on or off the network. CrowdStrike Falcon deploys in minutes to deliver actionable intelligence and real-time protection from Day One. It seamlessly unifies next-generation AV with best-in-class endpoint detection and response, backed by 24/7 managed hunting. Its cloud infrastructure and single-agent architecture take away complexity and add scalability, manageability, and speed.

# **Global Claims Expertise**

AIG's Cyber claims team is ready to assist clients as soon as they suspect a potential network breach. Our team has local presence supported by global resources, allowing our experts to manage unfolding events and quickly respond to inquiries. We help clients notify and support the recovery of affected customers, handle crisis communications, and determine exactly what happened.

We process approximately four cyber claims every business day, giving us the insight and expertise to understand complex cyber incidents. Our underwriting and claims teams partner to help create the best possible experience and avoid any miscommunication from the beginning to end of the process.

### **Claims Benefits**

- 24/7 access to our claims team to report a claim or seek guidance
- Access to local claims specialists and panels of domestic and international legal advisors on the ground around the world with the local expertise to handle cyber claims
- Complimentary one hour consultation with breach counsel and access to a breach response team to prepare for a cyber attack

#### **Unprecedented Experience**

Our claims specialists are ready to help policyholders manage a cyber incident from the moment it occurs. Our team provides the additional layer of defence an IT department needs to face the issue and its consequences.

#### **Rapid Support When Clients Need it Most**

- Our claims specialists react quickly to guide our clients, from assessing their needs to processing their claim.
- Most coverage is written on a primary basis, enabling our claims specialists to be on the front line with the authority to make decisions.
- Our network of legal firms, forensic investigators, and public relations firms offer immediate support for insureds managing the consequences of a breach.

#### **Rapid Technical Support**

• Our Cyber Claims Hotline is available 24/7. Once a call is made, the claims team will coordinate with the client to implement their response plan, engage any necessary vendors including breach counsel and forensics firms to identify immediate threats (such as a hacker inside a network), and start the restoration and recovery processes.

#### Add our expertise to yours

AIG provides breach coaching, forensic services, and insurance to get your client's business back to normal after a cyber event.

#### After calling the AIG Cyber Claims Hotline, clients may expect:

# **Cyber as a Peril Scenarios**

### **Property Damage & Business Interruption**

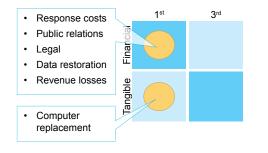

Destructive cyber attack against a European manufacturer: Hackers manipulated the manufacturer's control system, preventing its blast furnace from shutting down, and causing significant property damage.

Coordinated attack against an electric utility: Long term reconnaissance and multiple coordinated efforts involving spear phishing emails, malware, harvested credentials, and flooded call centres enabled attackers to manipulate the electric utility's SCADA system, causing a power outage for hundreds of thousands of customers.

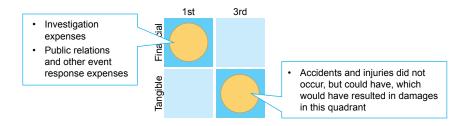

Cyber attack against a large energy company: Malware deployed by an insider with privileged access destroyed data and rendered 30,000 computers inoperable.

### **Bodily Injury and Products/Completed Operations Coverage**

Demonstrated ability to hack vehicles of a major auto manufacturer: White hat hackers demonstrated their ability to remotely take control of a vehicle-no injuries resulted, but it demonstrated the potential for a cyber attack against products linked to the internet.

# **Claims Narratives by Industries**

AIG has helped more than 22,000 companies face a cyber attack, uniquely positioning us to identify and anticipate claim trends and settlement values. Following are a range of scenarios that demonstrate AIG's cyber claims expertise in action.

### Healthcare

#### Healthcare - Data Theft

An insured hospital was notified of a potential breach involving protected health information (PHI) of over 40,000 patients.

AIG quickly engaged with the insured to retain breach counsel and the further retention of a forensic investigator. Based on the ensuing investigation, we coordinated with the insured and breach counsel on the selection and retention of vendors to handle the required notification to regulators and patients, offered patients access to identify monitoring protection, and established a call centre to handle inquiries and registration for the identity monitoring protection. AIG reimbursed the insured \$450,000 for Credit Monitoring and ID Theft Insurance; \$175,000 in notification and call centre costs; \$25,000 in forensic costs; and \$90,000 in legal costs. The policy also covered \$500,000 in regulatory fines assessed on the insured.

### Data Theft

A physician's email account was hacked and all his email was automatically forwarded to an email account in Eastern Europe – jeopardizing personal information of more than 3,500 patients.

AIG's quick response and vendor relationships helped the insured quickly retain experts to guide the organization through all steps required to effectively handle the breach: notification, establishment of a call centre, and bringing in the regulatory body.

### **Rogue Employee**

**SCENARIOS** 

An office employee stole the medical profiles and histories and detailed personal identity information of approximately 125,000 patients of an insured hospital.

AIG and the insured collaborated to form a crisis support team of outside professionals and reimbursed the hospital approximately \$800,000 for expenses associated with this crisis team. Subsequently, AIG helped the insured work through a second breach using experienced vendors from our expansive cyber security network.

### **Financial Institutions**

#### **Data Theft**

An email server and external hard drive of our client were stolen from the premises of an outside vendor. Personal information of approximately 175,000 individuals was compromised. AIG worked closely with the insured and provided reimbursement of \$1 million for notification and the retention of professionals.

#### Malware

Hackers gained entry to an insured's point of sale system and, before they were detected, were able to access over five million customer credit and debit card numbers.

AIG quickly engaged with the insured to retain breach counsel and the further retention of a forensic investigator and a payment card industry (PCI) forensic investigator. Based on the ensuing investigation, we coordinated with the insured and breach counsel on the selection and retention of vendors to manage the public relations messaging and the necessary notification to regulators and consumers, offered consumers access to credit monitoring protection, and established a call centre to handle inquiries and registration for the credit monitoring protection. Breach counsel was utilized to handle the defence of a dozen class action lawsuits and Federal and State regulatory investigations. The CyberEdge policy provided coverage for this activity, including event management expenses of \$750,000 for forensics, \$3 million for the credit monitoring, notification, and call centre, and \$50,000 for public relations. The CyberEdge policy provided further coverage of \$1.5 million for breach counsel, \$1.2 million in regulatory fines, and \$2 million in PCI fines.

### **Higher Education**

### **Security Breach**

A university audit uncovered a security breach which allowed unauthorized individuals to access the financial aid roster, including personal data.

AIG's cyber security specialists assisted the university in conducting a forensic audit, which determined that more than 18,000 student records may have been compromised. AIG also helped the university select vendors to provide call centre services and credit monitoring. AIG reimbursed the insured approximately \$70,000 above the retention for the vendors' services.

### **Credit Card Theft**

Three credit card pay station machines were compromised at a large university, and the university's IT department discovered a breach shortly thereafter in the university's network stemming from the pay station incident. AIG's cyber security specialists stepped in quickly to assist in the investigation. AIG worked with the insured to retain a forensic auditor as well as a breach coach and is evaluating the need for credit-monitoring services.

### Corporate Data Risk

A college inadvertently sent an email to approximately 80 students that attached a file containing personal data for all of its students. Working together, AIG and the college were able to retrieve 55 of the emails before they were opened. AIG worked closely with the school's dean of students and arranged notification and credit monitoring for the impacted students.

### **Identity Theft**

**SCENARIOS** 

A laptop containing a database with personally identifiable information numbers of nearly 7,500 current and former university students was stolen, along with the password for the data on the hard drive. Several students reported that third parties attempted to activate credit cards in their names.

AIG added its expertise to the university's with immediate assistance including call centre services, an anti-fraud protection vendor, credit-monitoring services, and counsel. AIG's quick response enabled the university to provide students with timely services to mitigate the risk of identity theft.

### Lawyers/Healthcare

#### **Stolen Property**

A laptop and briefcase belonging to the insured's general counsel were stolen from his car. Included in the theft was a folder containing billing audits including birth dates of more than 200 hospital patients.

AIG and the insured determined sufficient confidential information had been compromised to warrant notification. AIG retained counsel to act as a breach coach for the insured and provided those affected with a year of creditmonitoring services. To date, no third party claim has been made.

### **Business Interruption**

An associate who had resigned from an insured law firm erased all accessible hard drives and removed the firm's intellectual property and primary information from back-up systems. AIG's experienced cyber security response team worked closely with the firm to recreate all of the applications and information that had been erased and reimbursed the insured for an estimated \$300,000 in costs.

# Manufacturing

#### **Ex-Employee Hacking**

Following the termination of his job at a paper manufacturer, a former employee realized he could still access company services via virtual private network (VPN). Once in the company network he installed software to manipulate the industrial control systems and caused over \$1 million in lost production.

#### Ransomware

An automotive manufacturer was forced to halt production at one of its manufacturing plants when it discovered a ransomware virus had infected its computer network. Production at the plant completely halted.

### **Forced System Failure**

A global computer outage affected a medical device manufacturer's ability to produce goods and fulfill orders for multiple days. Employees were brought in for overtime hours to ensure orders were fulfilled in the timeliest manner possible.

### Retail

#### Malware

A pub was notified by a credit card company of a potential account data compromise.

On behalf of the pub's payment processor, AIG helped the merchant retain a forensic investigator who found that malware had been installed on its server. AIG called on its extensive cyber security expertise and worked with the merchant's payment processor to help replace the compromised server and fortify its data security. On behalf of the payment processor, AIG reimbursed the merchant \$17,000 for the audit-related services.

### **Security Breach**

Approximately three million passwords were stolen from an insured online service provider and leaked on the internet.

AIG's claims team and breach coach worked closely with the insured in recommending that affected individuals reset affected passwords, recommending security tips for users, emailing three million potentially impacted customers, and providing information on how to contact the insured's customers care team.

### **Network Interruption**

Hackers accessed the insured's system through a targeted spear-phishing attack. The hackers placed ransomware on the system, which once activated encrypted all the data on the insured's systems. Seven servers and hundreds of PCs were affected. The hackers demanded 12 Bitcoin for the encryption keys. The insured engaged with AIG's cyber claims specialists to coordinate the retention of breach privacy counsel and a forensics firm to respond to the event. AIG and breach counsel coordinated efforts with law enforcement. The insured and the forensics firm were unable to unencrypt the insured's data and, after consultation with AIG and law enforcement, the insured made the decision to pay the ransom.

We facilitated the retention of vendors to procure the necessary Bitcoin for payment of the ransom. Once paid, the insured received the necessary encryption keys. The systems were then gradually brought back online over the course of several days. Ultimately the insured's business systems were offline for 2.5 business days. AIG reimbursed the insured \$4,500 for the ransom, \$2,500 in Bitcoin procurement expenses and payment, \$950,000 in forensic investigation and remediation, \$65,000 in legal costs, and \$32,000 in public relations costs. In addition, AIG reimbursed the insured \$1.1 million for its lost income and \$850,000 for additional expenses associated with the outage.

### **Credit Card Theft**

SCENARIOS

The IT manager of an auto parts business discovered that a file which was not part of the company's website was being used to steal payment card information.

On behalf of the insured's payment processor, AIG assisted the merchant in retaining a forensic auditor and reimbursed \$7,000 for the forensic audit and \$3,500 for credit card company fees and fines.

#### **Suspected Breach**

A credit card company notified a pharmacy of a suspected breach.

The merchant was required by the credit card company to conduct a forensic investigation to ensure that its payment-processing environment was compliant with PCI-DSS.

Putting its extensive experience in cyber security to work, AIG, on behalf of the merchant's payment processor, helped conduct a forensic audit which demonstrated that the merchant was compliant.

### **Corporate Data Risk**

A luxury department store chain learned of a potential incident involving an unknown credit card processor that put personal information for more than 35,000 store cardholders at risk.

Calling on its strong vendor relationship network, AIG worked with the insured to retain top professionals to provide notification, replacement credit cards, and credit-monitoring services. AIG reimbursed the insured approximately \$200,000. AIG is providing legal counsel and closely collaborating with the retailer to explore its right to reimbursement from the credit card company and third party processor.

### **Identity Theft**

An insured car dealership was notified of the theft of a box containing sales files and, after investigation, determined that additional boxes containing sales contracts with personal customer information were also missing.

Although the applicable notification law did not apply because the files were in paper format, AIG urged the insured – and they agreed – to provide voluntary notification to potentially affected customers. AIG also retained a breach coach to assist the insured and provided free credit monitoring for one year to affected individuals.

# Claims Narratives by Industries Continued

### **Cyber Extortion**

Malware was placed on the network of a law firm when an employee fell victim to a phishing scheme. The malware was downloaded when the employee opened what appeared to be a valid video conference invitation. The extortionist threatened to shut down the system and prevented the insured from accessing its data unless the insured paid 10 Bitcoin. The extortionist indicated that the demand would increase each week until payment was made.

AIG quickly engaged with the insured to retain breach counsel and the further retention of a forensic investigator. Breach counsel and the insured reported the matter to the FBI. The forensic investigation determined that the extortionist had the capability to fulfill the threatened action and confirmed that the insured did not have a reliable back up source for its data. The CyberEdge policy provided coverage for the ransom payment as well as \$25,000 for breach counsel and \$85,000 for the forensic investigator to assess the threat and to ensure that the malware was eradicated.

#### **Cyber Extortion**

An insured's computer server was maliciously attacked by a virus that encrypted their data and demanded a \$5,000 ransom to un-encrypt. The insured reported the matter to law enforcement and local authorities. The insured did not pay the ransom on the advice of the law enforcement; rather AIG worked with the insured to engage an expert to perform a forensic analysis of their system. The forensic expert was able to determine that the impacted server did not contain any confidential information but rather the company's warehouse inventory information.

The forensic expert was able to remove the virus and strengthen the insured's data security protections. AIG reimbursed the insured more than \$45,000 for forensic costs incurred.

The claim scenarios provided herein are offered only as examples. Coverage depends on the actual facts of each event or claim and the terms, conditions and exclusions of each individual policy. Anyone interested in CyberEdge products should request a copy of the policy itself for a description of the scope and limitations of coverage.
