

Multinational Program Design Tool

With the release of the AIG multinational program design tool, we continue our over 80 year legacy of providing the multinational market with world-class products and services, innovative tools, and exceptional customer support.

This highly interactive web-based application, optimized for the iPad but also accessible from a PC, makes it easy for risk managers and brokers to access their need for a locally issued insurance policy in multiple countries around the world. The tool was designed to benefit all multinational companies, from those entering a new jurisdiction to organizations with already well-established operations in many countries. Additionally, on the brokerage sides, middle market brokers looking to enhance their multinational business will find significant value. A step by step evaluation guides you through numerous considerations, from local regulations and tax exposure to coverage and claims issues.

Using a simple and elegant touch interface, users can quickly step through the assessment in about 10 to 15 minutes. After the assessment is complete, a customized summary report with local protection suggestions is immediately generated. This clear and concise report was designed to support further consultative discussions between the client, broker, and insurer about optimal multinational design. The myAIG client portal is a comprehensive online account management tool putting everything you need to manage your multinational program in one convenient location. From checking the status of your controlled master program and specific policy details, to accessing robust business intelligence in our AIG market alert, Intellirisk executive dashboard for claims management, and your multinational risk management efforts are supported.

For more than 80 years, AIG Multinational has provided the tools that you need to manage and protect your global operations and are always seeking new ways to enhance global protection and empower clients.
